News Website using only HTML, CSS and Javascript | Javascript Project

Creating a News Website using only HTML, CSS, and JavaScript is an excellent project for web development enthusiasts. This tutorial guides users through the process of building a dynamic and visually appealing news platform without relying on external frameworks or libraries. Using HTML for content structure, CSS for styling, and JavaScript for interactivity, learners can understand how to fetch and display news articles dynamically.

This project provides practical experience in working with APIs, handling DOM manipulation, and creating a responsive layout. By incorporating these fundamental web technologies, developers can gain a comprehensive understanding of building a functional News Website from scratch. It's an ideal learning opportunity for those looking to hone their skills in front-end web development.
